Shed Makers "ULTRAFRAME" is made from Rectangular Hollow Section (RHS) structural steel (universal beam and web truss for larger spans). **All brackets, cleats and joiners are welded to the "ULTRAFRAME"**. This gives you a **much stronger shed** and will **halve the time spent erecting your shed**.

"C Section" light weight steel sheds require all brackets, cleats and joiners to be bolted to frame. This is very time consuming. **Shed Makers can supply "ULTRAFRAME" with small garages up to 30m span sheds at very little difference in cost and in most cases less than our competitors price on lightweight C Section sheds.**

Simply bolt your columns and rafters together and your frame is ready to add purlins!!!
No Apex or Knee braces required as steel tube is stronger than C Section.
